

## Innovative data collection and mapping for asset management and maintenance

Integrate with multiple spatial data sources to provide a framework for collecting data in the field or office.

### Key Features and Functions

Incorporates map coordinates and linear-based measurements to allow for integration and overlays with existing geospatial data

Device-agnostic solution that runs on any modern web browser

Integrates data from many published web services and data file formats

Provides innovative and simultaneous data collection of multiple assets, features and attributes

Functions online and offline allowing for continuous collection even in remote areas

Augment asset attributes with photo, audio, note and video attachments

## OmniSpatial Benefits are clear

- Improve data confidence by bringing the power of your GIS and integrated systems to the field
- Increase operational efficiency with near real-time data updates
- Incorporate spatial insights to empower your strategic planning

### Online or Offline Data Collection

- Choose from multiple modern web browsers
- Cache data in the office before performing offline field data collection
- Synchronize offline data whenever a connection is available

### Organization-Specific Configuration

- Utilize your organization's established roles and privileges
- Start with standard maps, data, and product configurations
- Set up personal configurations based on individual preferences
- Collect field data to create and modify SAP asset location and characteristics
- Route crews to specific assets using GPS functionality
- Bookmark specific work areas to be saved for easy use by technicians

### Multiple Data Formats

- Consume Esri map and feature services
- Import GeoJSON, Google KML, and other GIS data sources
- Add external feeds such as weather or crew locations for real-time operational awareness
