

HOW COMPLETE IS YOUR EAM MASTER DATA?

Are you getting the most from your SAP EAM system? How complete is your EAM Master Data and is it of sufficient quality?

This Rizing SAP EAM System and Data Health Assessment offering will provide the answers, allowing you to determine the true state of your SAP EAM system environment, processes and data, and identify improvement opportunities.

SAP EAM System and Data Health Assessment

Assessment Process

SAP EAM System Assessment

Rizing has worked with many customers across a variety of industries and has a deep understanding of the latest SAP and Partner system capabilities. We relate current system and process solutions to EAM maturity levels and best practices. We will:

- Interview key managers, supervisors, planners, etc.
- Interrogate SAP to review configuration, integration, transaction data, process flows, usability, reporting and KPI utilization, etc.
- Evaluate system use, issues and user pain points
- Determine process and system opportunities for improvement
- Help to formulate a plan for change

Rizing's Data Health Assessment

Rizing understands the difficulties that beset you and your data throughout its lifetime, from creation to archiving. The failure of a critical equipment system can quickly bring production to an expensive halt. All business processes require specific, accurate and complete data yet many businesses are unable to determine where to start. The following process reveals the current state of your data and helps focus efforts to maximize improvement initiatives:

- Collect sample plant equipment data from customer
- Process the data using proprietary profiling methodology and standardized business rules
- Provide quality and completeness analysis and collate results identifying areas for improvement

Deliverables

Rizing will combine their findings into one comprehensive and detailed report. The report will provide details on current health of systems use, process and data, and outline specific areas for improvement and an action plan for implementing change. The report will be targeted to each customer's specific needs and will include the following items:

- Existing data quality and its ability to support selected business processes (i.e., BOMs, maintenance plans, etc.)
- Specific analysis of Master Data objects and their completeness
- Analysis of transactional data and relationship to work process
- Evaluation of current EAM processes and use of SAP
 - » Preventive, Reactive, Projects, etc.
 - » Materials/Storeroom and Financial integration
 - » User and role considerations
- Evaluation of current system configuration and Reports/KPS's
- Recommendations for future improvement and the benefits/results impact

This low cost, fixed price opportunity provides organizations with a true objective understanding of its current state and delivers a roadmap for improvement.

Let the industry leaders in SAP Enterprise Asset Management and Enterprise Information Management get you on the path to success!
